

Model Type RS2

Pressure Drop Calculation

Please contact your local Runtal Representative for the Pressure Drop through an RS2 radiator, or series of RS2 radiators. The Pressure Drop for this style radiator is dependent on flow rate, the length of the RS2 radiator, and whether the radiator is a stand-alone radiator or part of a series of RS2 radiators, and so needs to be calculated for each application.

In general, short stand-alone RS2 radiators typically will have a Pressure Drop in the range of under 0.50 feet of head, while long stand-alone RS2 radiators will typically have a Pressure Drop in the range of up to 2.50 feet of head.
